

## MultiDec MixFW v2.x

---

Based on the type of selected Decoder, this software can execute the relative operations indicated on the job panel:

- to export the Keys zone from file of the Firmware and to save it on BIN file
  - to import a BIN file of the Keys to the inside of the Firmware file
  - to export the List Channels zone from file of the Firmware and to save it on BIN file
  - to import List Channels zone to the inside of the Firmware file
  - to export the MainCode zone from file of the Firmware and to save it on BIN file
  - to import the MainCode zone to the inside of the Firmware file
  - to export the BootLogo zone from file of the Firmware and to save it on BIN file
  - to import the BootLogo zone to the inside of the Firmware file
  - to export the MenuLogo zone from file of the Firmware and to save it on BIN file
  - to import the MenuLogo zone to the inside of the Firmware file
- 

**Attention:** highly it is adviced against to mix Firmware zone to various models of Decoders.

I remember that if send to the Decoder not compatible Firmware file, the Decoder could damage because of the wrong programming of the *CPU ALI* internal.
